To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with Mr. Joe Price (Registration No. 25,124) and Mr. Edward Lin (Registration No. 58,567) on 10 April 2009. The amendment is to cancel non-elected claims and to further clarify the invention. As per MPEP 713.04, a separate interview summary form is not provided because the content of the interview has been summarized herein.

The application has been amended as follows:

**IN THE CLAIMS:**

- Please **cancel Claims 14-15, 18 and 21**
- Please **replace claims 1, 16 and 17** as below:

**(Claim 1) (Currently Amended)** In a mobile communication system having an information content delivery system for delivering information to users aboard a mobile platform, a terminal data loading device semi-permanently installed on the mobile platform, said terminal data loading device comprising:

a media unit operatively connectable to a transportable media element containing media data, a predetermined portion of the media data being encrypted, the media unit being capable of reading the media data from the media element and outputting an encrypted media signal;

a security processor unit receiving the encrypted media signal from the media unit and outputting an unencrypted media signal based on one or more predetermined cryptographic keys utilizing a predetermined cryptographic algorithm;

a physical key unit for receiving a physical key, the physical key unit and physical key determining at least one cryptographic key for the security processor unit;

a control processor unit for receiving the unencrypted media signal from the security processor unit and parsing the unencrypted media signal into blocks of information of a predetermined size;

a wireless communication unit for receiving an information signal from the control processor unit and sending a an output signal to a receiving wireless

communication unit using a low-bandwidth cellular channel; and  
a wireline communication unit for receiving the blocks of information and  
outputting a wireline signal to a network on the mobile platform.

**(Claim 16) (Currently Amended)** A method of on-loading content for use with a  
terminal data loader device on a mobile platform, comprising:

connecting a transportable media element to a media unit, the media element  
containing media data, a predetermined portion of the media data being encrypted;  
reading the transportable media element containing media data with the media  
unit to produce a media signal;  
sending the media signal from the media unit to a security processor for  
outputting an unencrypted media signal based on one or more predetermined  
cryptographic keys utilizing a predetermined cryptographic algorithm;  
sending the unencrypted media signal from the security processor to a control  
processor unit;  
the control processor unit parsing the media signal into blocks of information of  
a predetermined size;  
sending the blocks of information to a wireline communication unit;  
translating the blocks of information with the wireline communication unit to  
produce a wireline signal;  
sending the an information signal to a wireless communication unit;  
translating the information signal with the wireless communication unit to

produce ~~a~~ an output signal;

outputting the output signal from the wireless communication unit to a web-based content management system using a low-bandwidth cellular channel; and

outputting the wireline signal from the wireline communication unit to a network on a mobile platform.

**(Claim 17) (Currently Amended)** The method of on-loading content of Claim 16, wherein the output signal is output from the wireless communication unit using a tri-band cellular data link.

#### ***Response to Arguments***

5. Applicant's argument filed 24 March 2009 have been fully considered and they are persuasive (See allowable subject matter below)

#### ***Allowable Subject Matter***
